Part III DETAILED ACTION

1

Claim Objections

1. Claim 13 is objected to because of the following informalities: In line 3 of claim 13 "perpendicular" should be --perpendicularly--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. § 102(b) as being clearly anticipated by Tanaka et al. Note a frame 2, electric heating element 13, and terminal assembly 23.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention

were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

1

5. Claims 9 and 10 are rejected under 35 U.S.C. § 103 as being unpatentable over Tanaka et al. Tanaka et al discloses the claimed invention except for utilizing a second heating element and connecting the heating elements in series or parallel. It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize a second heating element, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. St. Regis Paper Co. v. Bemis Co., 193 USPQ 8. Furthermore, it would have been an obvious matter of design choice to connect the heating devices in either series or parallel, since it was known in the art that these are both conventional ways to connect electrical heating devices.

Allowable Subject Matter

- 6. Claims 2-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. Claims 11-24 are allowable over the prior art of record.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. McMahon whose telephone number is (703) 308-1956. Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0861.
